SUBJECT INDEX

Accident
X-ray photoelectron study of samples containing reactor fuel from "lava" and products growing on it which formed at Chernobyl NPP due to the accident 685
ADC
The calculation of molecular Auger spectra 297
Adlayer
Iterrelation between atomic and electronic structures of alkaline-earth adlayers on Mo(112) and Re(10$\bar{1}$0) 369
Adsorbate
Benzene adsorption on silicon(111) surfaces with different reconstructions: a comparative study by synchrotron radiation photoemission 383
Electronic and geometric structure of adsorbates on oxide surfaces 347
AED
Factors which determine the populations of the magnetic quantum number in Auger electron diffraction 63
AES
AES and EELS analysis of the interaction between phosphorus and metallic indium 377
AES and LEED studies of surface stoichiometry of palladium silicide epilayers on Si(111) 407
An AES investigation of high temperature annealing of Ta–Hf and W–Hf alloy surface composition 695
Auger electron spectroscopic study of binary nickel(II)–iron(III) hydroxides 597
Development in Auger depth profiling technique 653
Effects of elastic and inelastic electron scattering on quantitative surface analyses by AES and XPS 605
Electron spectroscopy for diagnostics of various solid carbon phases 413
Electron spectroscopy of the surface of diamond and cubic boron nitride 713
Electron spectroscopy study of Si/Bi_2Sr_2Ca-Cu_2O_{8+x}(001) interface formation 439
Electron-stimulated effects in HTS singlecrystalline $Bi_2Sr_2CaCu_2O_{8+x}$ 479
Noble metal Auger spectroscopy as a probe of electronic structure: mapping Fermi energies in trimetallic alloys 145
Quantitative Auger analysis of A^3B^5 pseudobinary compounds by means of spectrum synthesis based on a non-linear least-squares fitting technique 659
Surface intercalation of graphite by lanthanum 427
The AES investigation for Mo–Zr alloy surface composition 703
The calculation of molecular Auger spectra 297
The interaction of hydrogen with the InP(100) substrates studied by AES, elastic peak electron spectroscopy (EPES) and EELS 391
X-ray photoelectron spectroscopy characterisation of third body layers formed during automotive friction braking 675
XPS and AES study of reactive Ti–Si interface 707
Alkali
Excited particles emission under electron bombardment of metal surfaces covered by alkaline films 151
Alloy
An AES investigation of high temperature annealing of Ta–Hf and W–Hf alloy surface composition 695
Comparison of an experimental and a theoretical study of the surface alloy Pt/Cu(111) 357
Noble metal Auger spectroscopy as a probe of electronic structure: mapping Fermi energies in trimetallic alloys 145
Photoionisation cross-section as a probe of 4d hybridisation in dilute Ag alloys 139
The AES investigation for Mo–Zr alloy surface composition 703
X-ray electron investigation of temperature dependence of chemical bond elements in Fe alloys 647
Anion
The influence of anion environment on the band structure of cluster $[CsCl_n]^{n-1}$ 195
Annealing
An AES investigation of high temperature annealing of Ta–Hf and W–Hf alloy surface composition 695
Antimony
Photoemission study of an In diffusion barrier in ZnSe/InP(100) heterostructures 719
ARAES
Factors which determine the populations of the

magnetic quantum number in Auger electron diffraction 63
ARES
High resolution photoelectron studies of atomic and molecular photoionisation using synchrotron radiation 233
ARIPES
Inverse combined with direct photoemission: momentum resolved electronic structure of 2D systems 77
ARPES
Factors which determine the populations of the magnetic quantum number in Auger electron diffraction 63
Fermi-liquid-type spectral function and angle resolved photoelectron spectra of the Ti3d$_z$2 band of $TiTe_2$ 111
Inverse combined with direct photoemission: momentum resolved electronic structure of 2D systems 77
ARUPS
Electronic bandstructure of monolayer Sb on GaP(110) 399
Argon
Dependence of the Ar3s and Kr4s photoelectron spectra on the energy of exciting photons exceeding the double-ionization threshold 255
Argon-like ion
Autoionization phenomena involving the $2p^5 3d$ configuration of argon-like ions in ionic solids 287
Auger
Auger decay processes of resonantly excited $3d^{-1}4f$ configuration of xenon-like ions in solids 277
Auger spectroscopy and the electronic structure of crystals 127
Autoionization phenomena involving the $2p^5 3d$ configuration of argon-like ions in ionic solids 287
Development in Auger depth profiling technique 653
Factors which determine the populations of the magnetic quantum number in Auger electron diffraction 63
Investigation of the electronic structure reconstruction during various stages of iron oxidation by target current and Auger spectroscopy 363
Noble metal Auger spectroscopy as a probe of electronic structure: mapping Fermi energies in trimetallic alloys 145
On the energy dependence of the Auger transition probabilities 339
Quantitative Auger analysis of A^3B^5 pseudobinary compounds by means of spectrum synthesis based on a non-linear least-squares fitting technique 659
Shake-up satellite structure of transition metal Auger spectra: $L_{2,3}M_{4,5}M_{4,5}$ spectra of the 4d metals 329
The calculation of molecular Auger spectra 297
Automotive
X-ray photoelectron spectroscopy characterisation of third body layers fromed during automotive friction braking 675

Barium
Electron APS spectra near the Ba3d threshold: comparison between Ba metal and oxide $YBa_2Cu_3O_{7-x}$ 485
Monte-Carlo simulation of elastic electron reflection from disordered surfaces of Ag, Ba and Au 617
BE
Relaxation energies in XPS and XAES of solid sulfur compounds 321
Benzene
Benzene adsorption on silicon(111) surfaces with different reconstructions: a comparative study by synchrotron radiation photoemission 383
Boron nitride
Electron spectroscopy of the surface of diamond and cubic boron nitride 713
Braking
X-ray photoelectron spectroscopy characterisation of third body layers formed during automotive friction braking 675

C_{60}
Electron spectroscopy for diagnostics of various solid carbon phases 413
Carbide
Electronic structure of nonstoichiometric transition metal carbides: a comparison of theory with XPS, EELS and XANES spectra 215
XPS studies of supported tungsten carbide(s) 589
Carbon
Bromination reaction in C=C double bond determination by XPS 565
Interrelation between π- and σ-electrons of valence band in carbon condensats 211
The AES investigation for Mo–Zr alloy surface composition 703
Carbon dioxide
High resolution photoelectron studies of atomic and molecular photoionisation using synchrotron radiation 233
Catalyst
Auger electron spectroscopic study of binary nickel(II)–iron(III) hydroxides 597
XPS of heterogeneous catalysts: structure and reactivity 569
XPS studies of supported tungsten carbide(s) 589
XPS study of catalytic compounds $H_2V_{12-x}M_xO_{31-\delta}(nH_2O)$ (where M is Mo, Cr) 579

CDT
Bromination reaction in C=C double bond determination by XPS 565
CDW
Photoemission investigation of Fermi surface instabilities in low-dimensional metals 97
CDXPS
Magnetic dichroism in X-ray photoemission 489
Cerium
Scaling behavior in photoelectron spectra of Ce- and Yb-based heavy fermions 121
Chalcopyrite
XPS study of non-stoichiometry for chalcopyrite crystal 727
Chelate
The effects of vibrational relaxation on oxygen K-emission spectra short-wave structure of chelate complexes 223
Chernobyl
X-ray photoelectron study of samples containing reactor fuel from "lava" and products growing on it which formed at Chernobyl NPP due to the accident 685
Cluster
The influence of anion environment on the band structure of cluster $[CsCl_n]^{n-1}$ 195
CM
Photoionisation cross-section as a probe of 4d hybridisation in dilute Ag alloys 139
CNDO
The electronic structure of crystalline nickel oxides 555
Co-ordination
Resonant photoemission in $SrCo_{1-x}Fe_xO_{3-\delta}$ perovskites 461
Condensat
Interrelation between π- and σ-electrons of valance band in carbon condensats 211
Conductivity
Thin polymer films on metal: assessment of a conductivity mechanism via valence band spectra 541
Coupled technique
Inverse combined with direct photoemission: momentum resolved electronic structure of 2D systems 77
Recent results of crossfertilization between electron spectroscopy and magnetism 505
The investigation of liquid surfaces by electron spectroscopy 771
ZPS and STS of layered semiconductor MoS_x 763
Crystal
Auger spectroscopy and the electronic structure of crystals 127
Crystal water
Relaxation energies in XPS and XAES of solid sulfur compounds 321
CuInSe(112)
Prediction and observation of II–VI/$CuInSe_2$ heterojunction band offsets 185
Cuprate
X-ray photoelectron studies of copper and oxygen states in high-T_c superconducting cuprates 469
X-ray photoelectron study of Tl–Ba–Ca–Cu–O ceramics 453
CVT
Radiative core-valence transitions in wide-gap crystals 335

DAPS
Electron APS spectra near the Ba3d threshold: comparison between Ba metal and oxide $YBa_2Cu_3O_{7-x}$ 485
Depth profile
Development in Auger depth profiling technique 653
Quantitative Auger analysis of A^3B^5 pseudobinary compounds by means of spectrum synthesis based on a non-linear least-squares fitting technique 659
Diamond
Electron spectroscopy of the surface of diamond and cubic boron nitride 713
Diamond(111)
Electron spectroscopy for diagnostics of various solid carbon phases 413
Holographic interpretation of photoelectron diffraction 1
Dichrosim
Magnetic dichroism in X-ray photoemission 489
DOS
Spectroscopic and magnetic properties of gadolinium Laves-phase compounds 525
Doping
Temperature influence on the energy characteristics of HTS $YBa_2Cu_3O_7$ (Ag) and magnetron sputtered films studied by XPS and XES 445
Double bond
Bromination reaction in C=C double bond determination by XPS 565
Double-ionization threshold
Dependence of the Ar3s and Kr4s photoelectron spectra on the energy of exciting photons exceeding the double-ionization threshold 255
DPES
Dependence of the Ar3s and Kr4s photoelectron spectra on the energy of exciting photons exceeding the double-ionization threshold 255

EAPS
Electron APS spectra near the Ba3d threshold: comparison between Ba metal and oxide $YBa_2Cu_3O_{7-x}$ 485
EBES
Elastic electron backscattering spectroscopy 623
EELS
AES and EELS analysis of the interaction between phosphorus and metallic indium 377
Electron spectroscopy study of $Si/Bi_2Sr_2Ca-Cu_2O_{8+x}(001)$ interface formation 439
Electronic structure of nonstoichiometric transition metal carbides: a comparison of theory with XPS, EELS and XANES spectra 215
The interaction of hydrogen with the InP(100) substrates studied by AES, elastic peak electron spectroscopy (EPES) and EELS 391
ELAPW
Theoretical study of ultraviolet photoemission spectra of noble metals 157
ELS
Electron spectroscopy for diagnostics of various solid carbon phases 413
Electron density
Study of the electronic structure of molybdenum and tungsten trisulfides and their lithium intercalates by X-ray electron and X-ray emission and adsorption spectroscopy 199
Energy dependence
On the energy dependence of the Auger transition probabilities 339
EPES
Au, Ag and Ag/Au samples, studied using elastic peak electron spectroscopy (EPES) and computer simulation 757
Development in Auger depth profiling technique 653
Excited particles emission under electron bombardment of metal surfaces covered by alkaline films 151
Monte-Carlo simulation of elastic electron reflection from disordered surfaces of Ag, Ba, and Au 617
The interaction of hydrogen with the InP(100) substrates studied by AES, elastic peak electron spectroscopy (EPES) and EELS 391
Equipment
Investigation of metal surfaces by VUV laser based photoemission spectroscopy 731
Synchrotron radiation complex ISI-800 747
ESD
Excited particles emission under electron bombardment of metal surfaces covered by alkaline films 151
ETBM
The electronic structure of $In_xGa_{1-x}As(001)$ d(2 × 4) surfaces 175
EXAFS
XPS of heterogeneous catalysts: structure and reactivity 569
Fermi
Calculated 2D Fermi surfaces and electronic structure of W(100) and W(110) 105
Fermi-liquid-type spectral function and angle resolved photoelectron spectra of the $Ti3d_{z^2}$ band of $TiTe_2$ 111
Nearly complete tuning of the Fermi level position at a prototypical metal–silicon interface: lead on unpinned Si(111) 1 × 1-H 419
Noble metal Auger spectroscopy as a probe of electronic structure: mapping Fermi energies in trimetallic alloys 145
On the energy dependence of the Auger transition probabilities 339
Photoemission investigation of Fermi surface instabilities in low-dimensional metals 97
Recent results of crossfertilization between electron spectroscopy and magnetism 505
Theoretical study of ultraviolet photoemission spectra of noble metals 157
Fermion
Scaling behavior in photoelectron spectra of Ce- and Yb-based heavy fermions 121
Friction
X-ray photoelectron spectroscopy characterisation of third body layers formed during automotive friction braking 675
Fuel
X-ray photoelectron study of samples containing reactor fuel from "lava" and products growing on it which formed at Chernobyl NPP due to the accident 685
Fullerene
Electron spectroscopy for diagnostics of various solid carbon phases 413
GaAs
Non-muffin-tin atomic scattering-matrices for semiconductor LEED calculations 167
The electronic structure of $In_xGa_{1-x}As(001)$ d(2 × 4) surfaces 175
Gadolinium
Spectroscopic and magnetic properties of gadolinium Laves-phase compounds 525
GaP(110)
Electronic bandstructure of monolayer Sb on GaP(110) 399
Gold
Au, Ag and Ag/Au samples, studied using elastic peak electron spectroscopy (EPES) and computer simulation 757

Monte-Carlo simulation of elastic electron reflection from disordered surfaces of Ag, Ba, and Au 617
Graphite
Surface intercalation of graphite by lanthanum 427
Graphite(0001)
Electron spectroscopy for diagnostics of various solid carbon phases 413

Hafnium
An AES investigation of high temperature annealing of Ta–Hf and W–Hf alloy surface composition 695
Halide
The influence of anion environment on the band structure of cluster $[CsCl_n]^{n-1}$ 195
Heterojunction
Prediction and observation of II–VI/$CuInSe_2$ heterojunction band offsets 185
Heterostructure
Photoemission study of an In diffusion barrier in ZnSe/InP(100) heterostructures 719
HF
Dependence of the Ar3s and Kr4s photoelectron spectra on the energy of exciting photons exceeding the double-ionization threshold 255
Theoretical study of inner shell photoabsorption spectra of simple molecules 267
Holograph
Holographic interpretation of photoelectron diffraction 1
Photoelectron diffraction and holography: present status and future prospects 19
HREELS
Benzene adsorption on silicon(111) surfaces with different reconstructions: a comparative study by synchrotron radiation photoemission 383
Thin polymer films on metal: assessment of a conductivity mechanism via valence band spectra 541
HRPES
High resolution photoelectron studies of atomic and molecular photoionisation using synchrotron radiation 233
HTS
Electron APS spectra near the Ba3d threshold: comparison between Ba metal and oxide $YBa_2Cu_3O_{7-x}$ 485
Electron spectroscopy study of $Si/Bi_2Sr_2CaCu_2O_{8+x}$(001) interface formation 439
Electron-stimulated effects in HTS singlecrystalline $Bi_2Sr_2CaCu_2O_{8+x}$ 479
Inverse combined with direct photoemission: momentum resolved electronic structure of 2D systems 77
Photoemission investigation of Fermi surface instabilities in low-dimensional metals 97
Resonant photoemission in $SrCo_{1-x}Fe_xO_{3-\delta}$ perovskites 461
Temperature influence on the energy characteristics of HTS $YBa_2Cu_3O_7$ (Ag) and magnetron sputtered films studied by XPS and XES 445
X-ray emission spectra and electronic structure of high-T_c superconductors and binary oxides 431
X-ray photoelectron studies of copper and oxygen states in high-T_c superconducting cuprates 469
X-ray photoelectron study of Tl–Ba–Ca–Cu–O ceramics 453
Hydride
X-ray photoelectron studies of TiCo surface treated in RF-plasma in H_2 atmosphere 699
Hydrogen
The interaction of hydrogen with the InP(100) substrates studied by AES, elastic peak electron spectroscopy (EPES) and EELS 391
Hydrogen bond
ZEKE spectroscopy of hydrogen-bonded phenol complexes 247

II–VI/$CuInSe_2$
Prediction and observation of II–VI/$CuInSe_2$ heterojunction band offsets 185
III–V
Quantitative Auger analysis of A^3B^5 pseudobinary compounds by means of spectrum synthesis based on a non-linear least-squares fitting technique 659
IMFP
Development in Auger depth profiling technique 653
Effects of elastic and inelastic electron scattering on quantitative surface analyses by AES and XPS 605
Monte-Carlo simulation of elastic electron reflection from disordered surfaces of Ag, Ba, and Au 617
Impurity
The influence of anion environment on the band structure of cluster $[CsCl_n]^{n-1}$ 195
Indium
AES and EELS analysis of the interaction between phosphorus and metallic indium 377
Photoemission study of an In diffusion barrier in ZnSe/InP(100) heterostructures 719
InP(100)
AES and EELS analysis of the interaction between phosphorus and metallic indium 377
Photoemission study of an In diffusion barrier in ZnSe/InP(100) heterostructures 719
The interaction of hydrogen with the InP(100) substrates studied by AES, elastic peak electron spectroscopy (EPES) and EELS 391
Intercalation
Study of the electronic structure of molybdenum and tungsten trisulfides and their lithium intercalates by

X-ray electron and X-ray emission and adsorption spectroscopy 199
Surface intercalation of graphite by lanthanum 427
XPS study of catalytic compounds $H_2V_{12-x}M_xO_{31-\delta}(nH_2O)$ (where M is Mo, Cr) 579
Interface
Nearly complete tuning of the Fermi level position at a prototypical metal–silicon interface: lead on unpinned Si(111) 1 × 1-H 419
$In_xGa_{1-x}As(001)$
The electronic structure of $In_xGa_{1-x}As(001)$ d(2 × 4) surfaces 175
Ion
Auger decay processes of resonantly excited $3d^{-1}4f$ configuration of xenon-like ions in solids 277
Autoionization phenomena involving the $2p^5 3d$ configuration of argon-like ions in ionic solids 287
IPES
Electronic and magnetic structure of rare-earth materials studied by high-resolution photoemission 515
Iron
Investigation of the electronic structure reconstruction during various stages of iron oxidation by target current and Auger spectroscopy 363
Iron compound
X-ray electron investigation of temperature dependence of chemical bond elements in Fe alloys 647
ISI-800
Synchrotron radiation complex ISI-800 747
IXPS
X-ray photoelectron spectroscopy characterisation of third body layers formed during automotive friction braking 675

Krypton
Dependence of the Ar3s and Kr4s photoelectron spectra on the energy of exciting photons exceeding the double-ionization threshold 255

LAPW
Theoretical study of ultraviolet photoemission spectra of noble metals 157
Lanthanon
Electronic and magnetic structure of rare-earth materials studied by high-resolution photoemission 515
Spectroscopic and magnetic properties of gadolinium Laves-phase compounds 525
Lanthanum
Surface intercalation of graphite by lanthanum 427
Laves phase
Spectroscopic and magnetic properties of gadolinium Laves-phase compounds 525
LDA
Auger spectroscopy and the electronic structure of crystals 127
Theoretical study of ultraviolet photoemission spectra of noble metals 157
LDF
Auger spectroscopy and the electronic structure of crystals 127
LEED
AES and LEED studies of surface stoichiometry of palladium silicide epilayers on Si(111) 407
Interrelation between atomic and electronic structures of alkaline-earth adlayers on Mo(112) and Re(10$\bar{1}$0) 369
Non-muffin-tin atomic scattering-matrices for semiconductor LEED calculations 167
XPS of heterogeneous catalysts: structure and reactivity 569
LEELS
Interrelation between atomic and electronic structures of alkaline-earth adlayers on Mo(112) and Re(10$\bar{1}$0) 369
Lead
Nearly complete tuning of the Fermi level position at a prototypical metal–silicon interface: lead on unpinned Si(111) 1 × 1-H 419
Liquid
Fermi-liquid-type spectral function and angle resolved photoelectron spectra of the Ti3d$_z$2 band of $TiTe_2$ 111
Liquid surface
The investigation of liquid surfaces by electron spectroscopy 771
Lithiation
Study of the electronic structure of molybdenum and tungsten trisulfides and their lithium intercalates by X-ray electron and X-ray emission and adsorption spectroscopy 199
LMTO
On the energy dependence of the Auger transition probabilities 339
Spectroscopic and magnetic properties of gadolinium Laves-phase compounds 525
Theoretical study of ultraviolet photoemission spectra of noble metals 157

Magnesium
XPS method for near surface analysis of Mg in magnesium compounds 669
Magnesium compound
XPS method for near surface analysis of Mg in magnesium compounds 669
Magnetic dichroism
Magnetic dichroism in X-ray photoemission 489

Magnetic quantum number
Factors which determine the populations of the magnetic quantum number in Auger electron diffraction 63
Magnetism
Electronic and magnetic structure of rare-earth materials studied by high-resolution photoemission 515
Magnetic dichroism in X-ray photoemission 489
Recent results of crossfertilization between electron spectroscopy and magnetism 505
MIES
The investigation of liquid surfaces by electron spectroscopy 771
MINDO/3
The effects of vibrational relaxation on oxygen K-emission spectra short-wave structure of chelate complexes 223
Mixed halides
Radiative core–valance transitions in wide-gap crystals 335
Mixed hydroxide
Auger electron spectroscopic study of binary nickel(II)–iron(III) hydroxides 597
Mixed oxide
The electronic structure of crystalline nickel oxides 555
X-ray emission spectra and electronic structure of high-T_c superconductors and binary oxides 431
Mixed salt
Auger electron spectroscopic study of binary nickel(II)–iron(III) hydroxides 597
Molybdenum
The AES investigation for Mo–Zr alloy surface composition 703
Molybdenum sulphide
Study of the electronic structure of molybdenum and tungsten trisulfides and their lithium intercalates by X-ray electron and X-ray emission and adsorption spectroscopy 199
XPS and STS of layered semiconductor MoS_x 763
Momentum resolved
Inverse combined with direct photoemission: momentum resolved electronic structure of 2D systems 77
Monocrystal
Electron-stimulated effects in HTS singlecrystalline $Bi_2Sr_2CaCu_2O_{8+x}$ 479
Monolayer
Electronic bandstructure of monolayer Sb on GaP(110) 399
Penning ionization electron and ultraviolet photoelectron spectroscopies of organic extra-thin films comprising alkyl chains: molecular aggregation, film growth and chemical reaction 531
Monte Carlo
Au, Ag and Ag/Au samples, studied using elastic peak electron spectroscopy (EPES) and computer simulation 757
Monte-Carlo simulation of elastic electron reflection from disordered surfaces of Ag, Ba, and Au 617
Mo(111)
UV photoelectron spectra of Nb and Mo single-crystal surfaces 547
Mo(112)
Interrelation between atomic and electronic structures of alkaline-earth adlayers on Mo(112) and Re(10$\bar{1}$0) 369
Muffin-tin
Electronic structure of nonstoichiometric transition metal carbides: a comparison of theory with XPS, EELS and XANES spectra 215

Nb(100)
UV photoelectron spectra of Nb and Mo single-crystal surfaces 547
Nb(110)
UV photoelectron spectra of Nb and Mo single-crystal surfaces 547
Nb(111)
UV photoelectron spectra of Nb and Mo single-crystal surfaces 547
Near-surface analysis
XPS method for near surface analysis of Mg in magnesium compounds 669
Nickel oxide
The electronic structure of crystalline nickel oxides 555
Non-muffin-tin
Non-muffin-tin atomic scattering-matrices for semiconductor LEED calculations 167
Non-stoichiometry
Electronic structure of nonstoichiometric transition metal carbides: a comparison of theory with XPS, EELS and XANES spectra 215
XPS study of non-stoichiometry for chalcopyrite crystal 727
Novel
Development in Auger depth profiling technique 653
Excited particles emission under electron bombardment of metal surfaces covered by alkaline films 151
Investigation of metal surfaces by VUV laser based photoemission spectroscopy 731
Photoelectron diffraction and holography: present status and future prospects 19

NPP
X-ray photoelectron study of samples containing reactor fuel from "lava" and products growing on it which formed at Chernobyl NPP due to the accident 685
Nuclear fuel
X-ray photoelectron study of samples containing reactor fuel from "lava" and products growing on it which formed at Chernobyl NPP due to the accident 685

One-dimensional system
Photoemission investigation of Fermi surface instabilities in low-dimensional metals 97
Oxidation
Investigation of the electronic structure reconstruction during various stages of iron oxidation by target current and Auger spectroscopy 363
Oxide
Electronic and geometric structure of adsorbates on oxide surfaces 347
The electronic structure of crystalline nickel oxides 555

PD
Holographic interpretation of photoelectron diffraction 1
Photoelectron diffraction and holography: present status and future prospects 19
Toward a surface photoelectron diffractometer: a progress report on selected advances and an assessment 49
PDOS
On the energy depedence of the Auger transition probabilities 339
$Pd_2Si(0001)$
AES and LEED studies of surface stoichiometry of palladium silicide epilayers on Si(111) 407
PEM
Investigation of metal surfaces by VUV laser based photoemission spectroscopy 731
PES
Auger decay processes of resonantly excited $3d^{-1}4f$ configuration of xenon-like ions in solids 277
Dependence of the Ar3s and Kr4s photoelectron spectra on the energy of exciting photons exceeding the double-ionization threshold 255
Electronic and magnetic structure of rare-earth materials studied by high-resolution photoemission 515
Estimation of photoemission intensities and the surface photoelectric effect 313
Investigation of metal surfaces by VUV laser based photoemission spectroscopy 731
Resonant photoemission in $SrCo_{1-x}Fe_xO_{3-\delta}$ perovskites 461
Scaling behavior in photoelectron spectra of Ce- and Yb-based heavy fermions 121
UV photoelectron spectra of Nb and Mo single-crystal surfaces 547
ZEKE spectroscopy of hydrogen-bonded phenol complexes 247
Perovskite
Resonant photoemission in $SrCo_{1-x}Fe_xO_{3-\delta}$ perovskites 461
Phenol
ZEKE spectroscopy of hydrogen-bonded phenol complexes 247
Phosphorus
AES and EELS analysis of the interaction between phosphorus and metallic indium 377
Photoionization cross section
Photoionisation cross-section as a probe of 4d hybridisation in dilute Ag alloys 139
Photopolymerization
Penning ionization electron and ultraviolet photoelectron spectroscopies of organic extra-thin film comprising alkyl chains: molecular aggregation, film growth and chemical reaction 531
PIES
Penning ionization electron and ultraviolet photoelectron spectroscopies of organic extra-thin films comprising alkyl chains: molecular aggregation, film growth and chemical reaction 531
Plasma
X-ray photoelectron studies of TiCo surface treated in RF-plasma in H_2 atmosphere 699
Polymer
Penning ionization electron and ultraviolet photoelectron spectroscopies of organic extra-thin films comprising alkyl chains: molecular aggregation, film growth and chemical reaction 531
Thin polymer films on metal: assessment of a conductivity mechanism via valance band spectra 541
Polyvanadium acid
XPS study of catalytic compounds $H_2V_{12-x}M_xO_{31-\delta}(nH_2O)$ (where M is Mo, Cr) 579
Program
Au, Ag and Ag/Au samples, studied using elastic peak electron spectroscopy (EPES) and computer simulation 757
Pt/Cu(111)
Comparison of an experimental and a theoretical study of the surface alloy Pt/Cu(111) 357
Pyrite
XPS study of non-stoichiometry for chalcopyrite crystal 727

QAES
Quantitative Auger analysis of A^3B^5 pseudobinary compounds by means of spectrum synthesis based on a non-linear least-squares fitting technique 659

RAES
Auger decay processes of resonantly excited $3d^{-1}4f$ configuration of xenon-like ions in solids 277
Radiative transition
Radiative core–valence transitions in wide-gap crystals 335
RCHF
Theoretical study of inner shell photoabsorption spectra of simple molecules 267
REELS
Electron energy-loss line-width for electrons reflected from a non-monocrystalline substance 641
Relaxation
Relaxation energies in XPS and XAES of solid sulfur compounds 321
The effects of vibrational relaxation on oxygen K-emission spectra short-wave structure of chelate complexes 223
Review
Toward a surface photoelectron diffractometer: a progress report on selected advances and an assessment 49
Re(10$\bar{1}$0)
Interrelation between atomic and electronic structures of alkaline-earth adlayers on Mo(112) and Re(10$\bar{1}$0) 369
RF
X-ray photoelectron studies of TiCo surface treated in RF-plasma in H_2 atmosphere 699
RHEED
The electronic structure of $In_xGa_{1-x}As(001)$ d(2×4) surfaces 175
RLMTO
Theoretical study of ultraviolet photoemission spectra of noble metals 157

Satellite
Shake-up satellite structure of transition metal Auger spectra: $L_{2,3}M_{4,5}M_{4,5}$ spectra of the 4d metals 329
SBZ
Electronic bandstructure of monolayer Sb on GaP(110) 399
Sb/GaP(110)
Electronic bandstructure of monolayer Sb on GaP(110) 399
Semiconductor
Prediction and observation of II–VI/$CuInSe_2$ heterojunction band offsets 185
Recent results of crossfertilization between electron spectroscopy and magnetism 505
XPS and STS of layered semiconductor MoS_x 763
Shake-up
Shake-up satellite structure of transition metal Auger spectra: $L_{2,3}M_{4,5}M_{4,5}$ spectra of the 4d metals 329
SIAM
Scaling behavior in photoelectron spectra of Ce- and Yb-based heavy fermions 121
SIMS
X-ray photoelectron studies of TiCo surface treated in RF-plama in H_2 atmosphere 699
SIPE
Excited particles emission under electron bombardment of metal surfaces covered by alkaline films 151
$Si/Bi_2Sr_2CaCu_2O_{8+x}(001)$
Electron spectroscopy study of $Si/Bi_2Sr_2CaCu_2O_{8+x}(001)$ interface formation 439
Silicon
Electron spectroscopy study of $Si/Bi_2Sr_2CaCu_2O_{8+x}(001)$ interface formation 439
XPS and AES study of reactive Ti–Si interface 707
Si(111)
AES and LEED studies of surface stoichiometry of palladium silicide epilayers on Si(111) 407
Benzene adsorption on silicon(111) surfaces with different reconstructions: a comparative study by synchrotron radiation photoemission 383
Holographic interpretation of photoelectron diffraction 1
Nearly complete tuning of the Fermi level position at a prototypical metal–silicon interface: lead on unpinned Si(111) 1×1-H 419
Silver
Au, Ag and Ag/Au samples, studied using elastic peak electron spectroscopy (EPES) and computer simulation 757
Monte-Carlo simulation of elastic electron reflection from disordered surfaces of Ag, Ba, and Au 617
Photoionisation cross-section as a probe of 4d hybridisation in dilute Ag alloys 139
Temperature influence on the energy characteristics of HTS $YBa_2Cu_3O_7$ (Ag) and magnetron sputtered films studied by XPS and XES 445
SR
Benzene adsorption on silicon(111) surfaces with different reconstructions: a comparative study by synchrotron radiation photoemission 383
High resolution photoelectron studies of atomic and molecular photoionisation using synchrotron radiation 233
Synchrotron radiation complex ISI-800 747

SRXPS
Prediction and observation of II–VI/$CuInSe_2$ heterojunction band offsets 185
STM
Surface intercalation of graphite by lanthanum 427
Thin polymer films on metal: assessment of a conductivity mechanism via valence band spectra 541
XPS of heterogeneous catalysts: structure and reactivity 569
STS
XPS and STS of layered semiconductor MoS_x 763
Stoichiometry
AES and LEED studies of surface stoichiometry of palladium silicide epilayers on Si(111) 407
XPS study of non-stoichiometry for chalcopyrite crystal 727
Strontium
High resolution photoelectron studies of atomic and molecular photoionisation using synchrotron radiation 233
Sulphur
Relaxation energies in XPS and XAES of solid sulfur compounds 321
Superconductor
Electron APS spectra near the Ba3d threshold: comparison between Ba metal and oxide $YBa_2Cu_3O_{7-x}$ 485
Electron spectroscopy study of $Si/Bi_2Sr_2Ca-Cu_2O_{8+x}$(001) interface formation 439
Electron-stimulated effects in HTS single crystalline $Bi_2Sr_2CaCu_2O_{8+x}$ 479
Resonant photoemission in $SrCo_{1-x}Fe_xO_{3-\delta}$ perovskites 461
Temperature influence on the energy characteristics of HTS $YBa_2Cu_3O_7$ (Ag) and magnetron sputtered films studied by XPS and XES 445
X-ray emission spectra and electronic structure of high-T_c superconductors and binary oxides 431
X-ray photoelectron studies of copper and oxygen states in high-T_c superconducting cuprates 469
X-ray photoelectron study of Tl–Ba–Ca–Cu–O ceramics 453
Surface
AES and LEED studies of surface stoichiometry of palladium silicide epilayers on Si(111) 407
Au, Ag and Ag/Au samples, studied using elastic peak electron spectroscopy (EPES) and computer simulation 757
Calculated 2D Fermi surfaces and electronic structure of W(100) and W(110) 105
Comparison of an experimental and a theoretical study of the surface alloy Pt/Cu(111) 357
Electron APS spectra near the Ba3d threshold: comparison between Ba metal and oxide $YBa_2Cu_3O_{7-x}$ 485
Electron spectroscopy of the surface of diamond and cubic boron nitride 713
Electronic and geometric structure of adsorbates on oxide surfaces 347
Electronic and magnetic structure of rare-earth materials studied by high-resolution photoemission 515
Electronic bandstructure of monolayer Sb on GaP(110) 399
Holographic interpretation of photoelectron diffraction 1
Nearly complete tuning of the Fermi level position at a prototypical metal–silicon interface: lead on unpinned Si(111) 1 × 1-H 419
Photoelectron diffraction and holography: present status and future prospects 19
Photoemission investigation of Fermi surface instabilities in low-dimensional metals 97
Surface intercalation of graphite by lanthanum 427
The AES investigation for Mo–Zr alloy surface composition 703
The electronic structure of $In_xGa_{1-x}As(001)$ d(2 × 4) surfaces 175
The investigation of liquid surfaces by electron spectroscopy 771
Toward a surface photoelectron diffractometer: a progress report on selected advances and an assessment 49
UV photoelectron spectra of Nb and Mo single-crystal surfaces 547
X-ray electron investigation of temperature dependence of chemical bond elements in Fe alloys 647
XPS and AES study of reactive Ti–Si interface 707
XPS method for near surface analysis of Mg in magnesium compounds 669
Surface PD
Toward a surface photoelectron diffractometer: a progress report on selected advances and an assessment 49
Surface photoelectric effect
Estimation of photoemission intensities and the surface photoelectric effect 313
Surface tension
The investigation of liquid surfaces by electron spectroscopy 771
Synchrotron
High resolution photoelectron studies of atomic and molecular photoionisation using synchrotron radiation 233
Synchrotron radiation complex ISI-800 747

Tantalum
An AES investigation of high temperature annealing of Ta–Hf and W–Hf alloy surface composition 695
TC
Investigation of the electronic structure reconstruction during various stages of iron oxidation by target current and Auger spectroscopy 363
Thin film
Comparison of an experimental and a theoretical study of the surface alloy Pt/Cu(111) 357
Electronic and geometric structure of adsorbates on oxide surfaces 347
Electronic and magnetic structure of rare-earth materials studied by high-resolution photoemission 515
Prediction and observation of II–VI/$CuInSe_2$ heterojunction band offsets 185
Thin polymer films on metal: assessment of a conductivity mechanism via valence band spectra 541
Titanium
Fermi-liquid-type spectral function and angle resolved photoelectron spectra of the Ti3d$_z$2 band of $TiTe_2$ 111
XPS and AES study of reactive Ti–Si interface 707
Transition
Investigation of the electronic structure reconstruction during various stages of iron oxidation by target current and Auger spectroscopy 363
On the energy dependence of the Auger transition probabilities 339
Radiative core–valence transitions in wide-gap crystals 335
Transition metal
Shake-up satellite structure of transition metal Auger spectra: $L_{2,3}M_{4,5}M_{4,5}$ spectra of the 4d metals 329
Trimetallic alloy
Noble metal Auger spectroscopy as a probe of electronic structure: mapping Fermi energies in trimetallic alloys 145
Tungsten
An AES investigation of high temperature annealing of Ta–Hf and W–Hf alloy surface composition 695
Calculated 2D Fermi surfaces and electronic structure of W(100) and W(110) 105
Tungsten carbide
XPS studies of supported tungsten carbide(s) 589
Tungsten sulphide
Study of the electronic structure of molybdenum and tungsten trisulfides and their lithium intercalates by X-ray electron and X-ray emission and adsorption spectroscopy 199
Two-dimensional system
Calculated 2D Fermi surfaces and electronic structure of W(100) and W(110) 105
Fermi-liquid-type spectral function and angle resolved photoelectron spectra of the Ti3d$_z$2 band of $TiTe_2$ 111
Inverse combined with direct photoemission: momentum resolved electronic structure of 2D systems 77
Investigation of metal surfaces by VUV laser based photoemission spectroscopy 731
Photoemission investigation of Fermi surface instabilities in low-dimensional metals 97
Recent results of crossfertilization between electron spectroscopy and magnetism 505

Ultrathin film
Electronic and geometric structure of adsorbates on oxide surfaces 347
Penning ionization electron and ultraviolet photoelectron spectroscopies of organic extra-thin films comprising alkyl chains: molecular aggregation, film growth and chemical reaction 531
UPS
Interrelation between atomic and electronic structures of alkaline-earth adlayers on Mo(112) and Re(10$\bar{1}$0) 369
The investigation of liquid surfaces by electron spectroscopy 771
UVPES
Interrelation between π- and σ-electrons of valence band in carbon condensats 211
Penning ionization electron and ultraviolet photoelectron spectroscopies or organic extra-thin films comprising alkyl chains: molecular aggregation, film growth and chemical reaction 531
The effects of vibrational relaxation on oxygen K-emission spectra short-wave structure of chelate complexes 223
ZEKE spectroscopy of hydrogen-bonded phenol complexes 247

VLEED
Non-muffin-tin atomic scattering-matrices for semiconductor LEED calculations 167
VUV
Investigation of metal surfaces by VUV laser based photoemission spectroscopy 731

W(100)
Calculated 2D Fermi surfaces and electronic structure of W(100) and W(110) 105
W(110)
Calculated 2D Fermi surfaces and electronic structure of W(100) and W(110) 105

X-ray diffraction
X-ray photoelectron studies of TiCo surface treated in RF-plasma in H_2 atmosphere 699

XAES
Relaxation energies in XPS and XAES of solid sulfur compounds 321
Shake-up satellite structure of transition metal Auger spectra: $L_{2,3}M_{4,5}M_{4,5}$ spectra of the 4d metals 329
XANES
Electronic structure of nonstoichiometric transition metal carbides: a comparison of theory with XPS, EELS and XANES spectra 215
XPS studies of supported tungsten carbide(s) 589
XAS
Resonant photoemission in $SrCo_{1-x}Fe_xO_{3-\delta}$ perovskites 461
XES
Study of the electronic structure of molybdenum and tungsten trisulfides and their lithium intercalates by X-ray electron and X-ray emission and adsorption spectroscopy 199
Temperature influence on the energy characteristics of HTS $YBa_2Cu_3O_7$ (Ag) and magnetron sputtered films studied by XPS and XES 445
The effects of vibrational relaxation on oxygen K-emission spectra short-wave structure of chelate complexes 223
X-ray electron investigation of temperature dependence of chemical bond elements in Fe alloys 647
X-ray emission spectra and electronic structure of high-T_c superconductors and binary oxides 431
Xenon-like ion
Auger decay processes of resonantly excited $3d^{-1}4f$ configuration of xenon-like ions in solids 277
Xerogel
XPS study of catalytic compounds $H_2V_{12-x}M_xO_{31-\delta}(nH_2O)$ (where M is Mo, Cr) 579
XPD
Factors which determine the populations of the magnetic quantum number in Auger electron diffraction 63
XPS
Bromination reaction in C=C double bond determination by XPS 565
Effects of elastic and inelastic electron scattering on quantitative surface analyses by AES and XPS 605
Electronic structure of nonstoichiometric transition metal carbides: a comparison of theory with XPS, EELS and XANES spectra 215
Magnetic dichroism in X-ray photoemission 489
Noble metal Auger spectroscopy as a probe of electronic structure: mapping Fermi energies in trimetallic alloys 145
Radiative core–valence transitions in wide-gap crystals 335
Relaxation energies in XPS and XAES of solid sulfur compounds 321
Spectroscopic and magnetic properties of gadolinium Laves-phase compounds 525
Temperature influence on the energy characteristics of HTS $YBa_2Cu_3O_7$ (Ag) and magnetron sputtered films studied by XPS and XES 445
Theoretical study of inner shell photoabsorption spectra of simple molecules 267
Thin polymer films on metal: assessment of a conductivity mechanism via valence band spectra 541
X-ray photoelectron spectroscopy characterisation of third body layers formed during automotive friction braking 675
X-ray photoelectron studies of copper and oxygen states in high-T_c superconducting cuprates 469
X-ray photoelectron studies of TiCo surface treated in RF-plasma in H_2 atmosphere 699
X-ray photoelectron study of samples containing reactor fuel from "lava" and products growing on it which formed at Chernobyl NPP due to the accident 685
X-ray photoelectron study of Tl–Ba–Ca–Cu–O ceramics 453
XPS and AES study of reactive Ti–Si interface 707
XPS and STS of layered semiconductor MoS_x 763
XPS method for near surface analysis of Mg in magnesium compounds 669
XPS of heterogeneous catalysts: structure and reactivity 569
XPS studies of supported tungsten carbide(s) 589
XPS study of catalytic compounds $H_2V_{12-x}M_xO_{31-\delta}(nH_2O)$ (where M is Mo, Cr) 579
XPS study of non-stoichiometry for chalcopyrite crystal 727

Ytterbium
Scaling behavior in photoelectron spectra of Ce- and Yb-based heavy fermions 121

ZEKE
ZEKE spectroscopy of hydrogen-bonded phenol complexes 247
Zirconium
The AES investigation for Mo–Zr alloy surface composition 703
ZnSe/InP(100)
Photoemission study of an In diffusion barrier in ZnSe/InP(100) heterostructures 719
